GENERAL DESCRIPTION

OPENGATE is the first and only fully open, active walk-through detection system, composed of two freestanding pillars.

Contrary to Metal Detector Gates, OPENGATE does not require any mechanical or electrical connection between the two pillars that define the passageway.

Acoustic and optical signals, located at the top of the pillars, provide real-time status and alarm indications.

OPENGATE is the most portable, elegant, easy to position and ready to use weapons detection system. No installation, adjustment or assembly Procedures.
